

March 19 Meeting Minutes

We discussed our current repository setup and the project board. We decided that our epics are Map, Events, User Profile, and Social and we will be implementing them in that order.

We have decided to split our team into front end (Julia and Makaela), back end (Mia and Jules), and full stack (Jessie), so we will assign members to tasks accordingly. For next week, Jules and Makaela will work on getting the map set up (Map API and displaying the map on the homepage, respectively). Julia and Mia will work on the events set up (events database and displaying the events page, respectively). Jessie is going to start the user profile page.

Going forward, we are going to use a Personal to Feature to Main branch setup, with each person working on their own personal branch, then pushing to feature and eventually to main.
